What is your investment goal?

Different financial goals require different investing strategies. Once you define your investment goal, we can suggest a portfolio designed to help you reach it.

To get started, we need you to tell us about your goal, your risk tolerance, and when you'll need your investment dollars. As you answer the questions, look for the ? icon to get more information about our reasons for asking them.

Select your goal ~ 210

- ○ Retirement
- ○ Education
- ○ Wealth accumulation
- ○ Other (please specify) [ ]
  i.e., second home

Give your goal a name (optional)

This goal is for [ ] ~ 201
i.e., Emma's college, second home, new boat

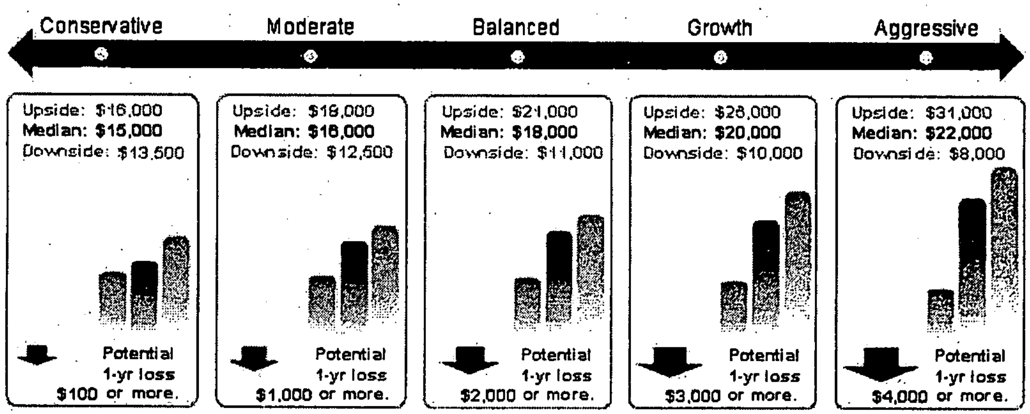
Step 2 of 4

Amerivest : **Assess Risk Tolerance**

800-xxx-xxxx

How you assess your tolerance for risk will affect the performance of your investments over time. Investing in riskier investments generally results in a higher investment return over the long term, but riskier investments also tend to fluctuate more in value over the short term. For example, assume you make a $10,000 investment that you plan to hold for 10 years, without making any additional savings contributions.

Taking into account the potential value of the investment after 10 years, as well as the potential short term losses on the investment, choose which of the following risk profiles best describes your tolerance for risk:



301

The examples above are designed solely to help you assess your tolerance for risk.
Stated returns are for illustrative purposes only and are not a projection or prediction of results.

Need Help?
For help identifying your tolerance for risk, click below for a quick risk survey.

What is your risk tolerance?

Knowing how much long-term risk you're comfortable with is an important part of developing an investment plan. It determines what kind of investing strategy best suits your needs.

This brief quiz consists of **6** questions that will determine the level of investment risk you should accept. Please answer them by selecting the button that most closely reflects your position.

Risk tolerance question 1 of 6

1. Which concerns you more: day-to-day fluctuations in the value of your investments, or the possibility that your investments may not grow enough to meet your long-term goals?

I'm more worried about day-to-day fluctuations. ○ ○ ○ ○ ○ **I'm more concerned about long-term results.**

Continue >

Fig. 4A

Amerivest®

AMERITRADE

Risk tolerance question 2 of 6

2. You need to reach your financial goal in 10 years, and you've just invested a portion of your assets specifically toward achieving it. In the first year, these assets lose 1/3 of their total value, but evidence suggests that the portfolio should more than double over 10 years—enough to meet your goal. **How would you react?**

I don't think I could stand it; I'd switch to more conservative investments. ○ ○ ○ ○ ○ **It doesn't bother me; I'd stick with my plan.**

5. Choose the statement that best reflects yo

I'm interested in stable growth in the value of my portfolio, even if it means achieving lower results in the long run.

sted in achieving the growth possible in my even if it means accepting t short-term losses.

Amerivest help

More aggressive investing may result in short-term volatility, which sometimes means significant dollar losses. But over the long run, you may end up with more than you need to satisfy your goal. If you don't like to lose money, select investments that have lower returns but offer more stable growth.

Amerivest°

AMERITRADE

How will you allocate funds?

The right approach to asset allocation helps to offset market volatility.

By dividing your investment among various broad asset classes, you can benefit from the overall performance of the market while keeping risk within the parameters you've defined.

°Required information

When do you expect to retire?

Select a year ~202

How old will you be when you retire in [yr]?

years ~ 203

How much money will you need in today's dollars? ~204

$ per month Anticipated annual rate of inflation

i.e., 20,000

Calculate Investment

Help

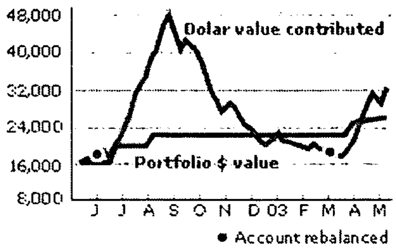
Your Portfolio Performance

This chart shows the value of your Amerivest portfolio and related information. Select the time horizon and comparison options you wish to view. Please take time to review how these values are calculated.



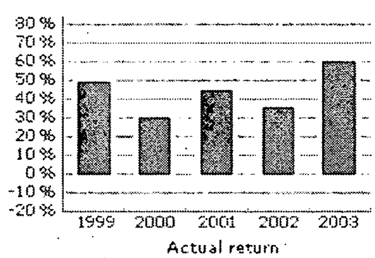
Time Horizon: Since Inception

Redraw Chart

How Values are Calculated

Target Value is an educated guess at how well your portfolio may perform based on the historical performance of asset classes similar to those in your portfolio and forward looking estimates of economic factors. The actual performance of your investment will vary because of many factors and your investment may lose value. Portfolio Dollar Value is based on the value of your Amerivest holdings, but does not include dividends, interest or expenses. Dollar Value Contributed represents your initial Amerivest investment amount and money added or removed via the Amerivest Add Money and Rebalance pages. Performance for the Conservative, Moderate, Balanced, Growth or Aggressive Portfolio shows the approximate value of a hypothetical portfolio invested with the same amount of money in the Amerivest-recommended ETFs for that strategy and does not include dividends, interest or expenses. None of the values shown above reflect the impact of taxes. Please review important information for further details.

Here is the rate of return for your Amerivest portfolio and several comparison rates of return. Select the time horizon and comparison options you wish to view. Please take time to review how these rates of return are calculated.



Time Horizon: Since Inception

Redraw Chart

How Rates of Return are Calculated

Target ROR is an educated guess at how well a hypothetical portfolio made up of asset classes similar to those in your portfolio may perform. Target ROR assumes that distributions (such as dividends and interest) are accumulated and reinvested at time of rebalance. Your actual ROR will vary because of many factors and your investment may lose value. Actual ROR is based on the change in value of your Amerivest holdings. Actual ROR does not include dividends, interest or expenses. S&P 500 ROR is based on the S&P 500 index and does not include dividends, interest or expenses. The comparison rates of return for Conservative, Moderate, Balanced, Growth or Aggressive Portfolios are based on a hypothetical investment in the Amerivest-recommended ETFs for that strategy and do not include dividends, interest or expenses. None of the rates of return shown above reflect the impact of taxes. Please review important information for further details.
